Description:

SH-33 runs North to South between Driggs and Victor in the Teton Valley. For this portion of Highway 33 County Road S500 W runs parallel and to the west side of SH-33. Multiple Driveways and county roads connect S500 W to SH-33. Several accesses are for personal use and don't meet current ITD standards for spacing and design. To increase safety for this corridor, ITD and the Teton County are partnering together to remove all accesses that are not county roads. Residents and businesses within this area can access SH-33 from existing County Roads. ITD is also working to make improvements to the county road intersections by installing turn lanes on SH-33.

The SH-33 Access Improvements Map on IPLAN shows what accesses are to be removed immediately, what access will be removed in the future, and what county road intersections will be update by order of priority. Please also see the Visual Whitepaper of SH-33 Teton Valley to show what other Projects ITD is working on in Teton County.

Access Closure Plan:

ITD Maintenance Crews will remove identified accesses by excavating and scarifying the ground to return the shoulder/median back to match highway slopes and original ground. The disturbed areas will then be reseeded. The same process will be used around the bike path.

This work will be performed between October 1st 2025 and will be completed by May 29, 2027 (Memorial Day Weekend). Crews will start by removing the easier locations first and will perform the work as weather allows and around winter maintenance.
